Wind Mapping with Bubbles

Draw a map of your house or apartment and mark on the map where you blow your bubbles, and which direction the bubbles go.

What patterns did you notice in the bubbles as the wind blew them?

Did the wind blow the same direction all around the building?

What would happen if you tried this later in the day?

... later in the month?

...a different season?

When a meteorologist says the winds are S at 5 mph...what does that mean?Circle one...The winds are blowing from the south to the northThe winds are blowing to the south from the north

What kind of jobs or activities would wind direction and speed be important to know?
